Ibn Zohr University

Agadir, Morocco

Abstract

This paper investigates conceptual metaphors in the Moroccan Tachelhit variety in the light of the contemporary theory of metaphor advanced by Lakoff and Johnson (1980). The main objective of this research is to find out the conceptual differences between Tachelhit and English language. It also aims at contributing to the field of metaphor in Tamazight linguistics as well as filling the gap that exists in the literature. This qualitative research adopted content analysis as a technique with which data is collected, categorized, and analyzed. This research shows that metaphor can be used as a tool to examine the cultural groupthink of communities. The main findings of the present study include the conceptual differences between Tachelhit and English in metaphors such as: TIME IS A HUMAN BEING, NEWS IS A HUMAN BEING, DIRECTNESS IS UP, WORDS ARE LIQUID, HUNGER IS A KILLING THING, WEAKNESS IS EMPTINESS, GOODNESS IS A STRAIGHT LINE, MONEY IS DIRT, USEFULNESS IS A PRECIOUS OBJECT and REPUTE IS A DELICATE OBJECT; which are all examples of conceptual metaphors that exist in Tachelhit. This research paper also demonstrates that metaphor can structure gestures the way it structures metaphoric linguistic expressions. Conceptual metaphors are vital elements that need be taken into consideration in intercultural as well as intracultural contexts to overcome communication failures.

Keywords : conceptual metaphor theory, gesture, Tamazight, Moroccan Tachelhit

Introduction

Metaphor has been a study focus since and before the times of Plato and Aristotle. Since then, metaphor was considered a mere linguistic ornament that is used only in poetry, and far away from being unique to everyday language. With advancements in cognitive linguistics, especially with the Contemporary Theory of Metaphor (1992) by George Lakoff and Mark Johnson, a myriad of research followed the trail to study metaphor as a matter of, not only language but cognition as well. This article follows the footpath of the contemporary theory of metaphor in that it considers metaphor as a “linguistic, conceptual, socio-cultural, neural, bodily phenomenon” (Kövecses, 2005, p.8).

There is a multitude of studies researching conceptual metaphors in different languages. However, no research has yet been done to study conceptual metaphors in Tachelhit. Tachelhit is a dialect of Tamazight¹ or Berber language. Tamazight is a language within Afro-asiatic family and is spoken in the so-called Tamazgha region. This region includes North Africa, the Sahara, and West African Sahel (Chaker & Mettouchi, 2006).

As stated by Chaker and Mettouchi (2006) in the *Concise Encyclopedia of Languages of the World*, about 40% of the Moroccan population are Amazigh. In Morocco, there are three dialects within the Tamazight language. Tarifit is spoken in the north, Tamazight² in the center, Tachelhit, which is the concern of this study, is spoken in the South of Morocco (Chaker & Mettouchi, 2006).

This piece of research is of paramount importance in that, first of all, it contributes to Tamazight linguistics which shows the paucity of research in the field of cognitive linguistics. This research also contributes to the academic study of Tachelhit metaphor in light of the contemporary theory of metaphor by Lakoff and Johnson (1980), which is virtually nonexistent. Secondly, this research article also seeks to examine the universality of metaphors. It does so by testing the hypothesis which postulates that some metaphors are universal. Studying metaphors in Tachelhit will shed light on the cultural models³ that characterize some of the conceptual metaphors in Tachelhit as well as reveal the extent to which these metaphors are universal. Last but not least, the significance of this study is attested and witnessed in its attempt to overcome intercultural communication barriers and failures caused by unawareness of metaphor variation across languages.

Unlike the theory of metaphor in *Metaphors We Live By* by Lakoff and Johnson (1980), this article attends more to metaphorical variation and causes of these variations among cultures. It does so by examining metaphors in Tachelhit language in comparison with the English language. This study also focuses on metaphoricity in gesture in the context of Amazigh culture. The objective of this research can be rendered into the following question which this study will try to answer: Are there any conceptual metaphors which are different between Tachelhit and English?

Literature Review

Metaphor is from the Greek word *metaphorá* which means transference. On the word of Bussmann (1996), ‘metaphor’ stands for a figure of speech in ancient rhetoric from which it was taken. According to Lakoff (1992), the word metaphor “was defined as a novel or poetic expression where one or more words for a concept are used outside of its normal conventional meaning to express a similar concept” (p.202). With the contemporary theory of metaphor advanced by Lakoff and Johnson (1980), metaphor is not regarded to any further extent as a matter of language only, but of thought as well.

Metaphor has been a subject of academic and intellectual discussion since and before the times of Plato and Aristotle. Furthermore, conceptual metaphor was a subject of deliberation for many other philosophers such as Locke and Kant (Kövecses, 2010). What is new in the contemporary theory of metaphor, as mentioned in *Metaphor* by Kövecses (2010), is that it is “a comprehensive, generalized, and empirically tested theory” (p. xii).

Micheal Reddy is to be considered the first to usher in, in his influential book *The Conduit Metaphor* (1979), the contemporary theory of metaphor which stipulates that the conventional everyday language is conceptual in nature (Lakoff, 1992). The traditional assumption regards everyday language as literal and non-metaphorical. This erroneous assumption is refuted in *Metaphors We Live By* by Lakoff and Johnson (1980) who view everyday language as a matter of cognition. Lakoff and Johnson go further to assert that conceptual metaphors that characterize everyday language define our everyday realities and activities in that they structure what we perceive and how we function.

As stated by Lakoff and Johnson (1980), “the essence of metaphor is understanding and experiencing one kind of thing in terms of another (p.5).” Metaphor, according to them, is of three types: structural metaphors, orientational metaphors, and ontological metaphors. According to Lakoff and Johnson, structural metaphors are those metaphors that structure a concept in terms of another. The source provides rich resource by which to understand the target. For example, the concept *argument* is experienced and understood in terms of another concept *war* as will be shown below. The following are exemplary structural metaphors taken from Lakoff and Johnson (1980):

ARGUMENT IS WAR⁴

Your claims are indefensible.

I demolished his argument.

He shot down all of my arguments (p. 4).

IDEAS ARE FOOD

Half-baked ideas.

I just can't swallow that claim.

There are too many facts here for me to digest them all (p. 46).

THEORIES ARE BUILDINGS

The theory needs more support.

We need to buttress the theory with solid arguments.

They exploded his latest theory (p. 46).

TIME IS MONEY

*You're **wasting** my time.*

*I don't **have** time to **give** you.*

*How do you **spend** your time these days?*

*He's living on **borrowed** time (pp. 7-8).*

The second type of metaphor is the orientational one. In *Metaphors We Live By* (1980), orientational metaphors “organize a whole system of concepts with respect to one another” (p.14), using spatial orientations such as up, down, in, and out. The following conceptual metaphors are orientational (Lakoff & Johnson, 1980):

HAPPY IS UP, SAD IS DOWN⁵

I'm feeling up

That boosted my spirits

My spirits rose

I'm feeling down

He's really low these days (p. 15).

Other conceptual metaphors fall within the category of ontological metaphors⁶. Ontological metaphors, on the other hand, do not structure one concept in terms of another. However, they “enable speakers to conceive of their experiences in terms of objects, substance, or container” (Kövecses, 2010, p.328). For example, in the first sentence: *My fear of insects is driving my wife crazy*, the fear here, which is a feeling, is conceived of as an object that frightens the wife. The following are other ontological metaphor examples taken from Lakoff and Johnson (1980):

My fear of insects is driving my wife crazy (p.26).

I can't keep up with the pace of modern life (p.27).

My mind just isn't operating today (p.27)/ his mind snapped (p.28).

Her ego is very fragile (p. 28).

As mentioned earlier, the contemporary theory of metaphor considers metaphor not purely as a linguistic phenomenon, but also a neural experience. This neural experience of metaphor is known as the neural theory of metaphor. According to this neural theory (Lakoff, 2004-2008), certain neurons in the brain are activated or “fired” when other neurons corresponding to certain concepts or actions are activated. These neural connections are made through the everyday embodied experience. For example, the conceptual metaphor *AFFECTION IS WARMTH* activates two areas in the brain corresponding, respectively, to affection and warmth. These two concepts are connected or “wired” together because of the embodied experiences. One example of this

embodied experience is the child who can feel motherly affection through being close to feeling body warmth of his mother (Kövecses, 2005).

Kövecses (2010) claims that universality of some metaphors “arises from the universal aspects of the human body” (p.197) as seen with the *AFFECTION IS WARMTH* conceptual metaphor. However, the universal aspects of the human body do not necessarily lead to universal metaphors. Languages can share many conceptual metaphors, but at the same time can differ on others. For example, languages can differ in the metaphors that involve “heart”. In Zulu, the heart is associated with “anger and patience-impatience, tolerance-intolerance (Kövecses 2010, p.69)” whereas, in English, the heart is associated with love and affection.

According to Kövecses (2010), there are two causes of cross-cultural variation in metaphor. The first is the broader cultural context. This refers to the “governing principles and key concepts in a given culture (p.218).” For example, in Euro-American culture, anger is conceptually originated from the *four humors* (phlegm, black bile, yellow bile, and blood). It is also believed that the four humors determine the type of body, personality, and medical problems. Another example of broader cultural context comes from Chinese culture. In Chinese culture, the concept of anger *nu* is closely related to the concept of *qi* which means energy. Therefore, it is believed that for a person to be calm and in harmony, *qi* must be in balance. The concept of anger in Euro-American and Chinese cultures is explained in terms of the *four humors* and *qi*, respectively (Kövecses, 2010).

The second cause, according to Kövecses (2010), is the natural and physical environment of a culture. The environment at which a given language is located shapes and influences that language in many ways. This impact can be seen in the metaphorical linguistic expressions that speakers from different habitats use to perceive of their ‘universes.’ For example, speakers of Arabic may be acclimatized to perceiving camels as ships of deserts. Another example of the habitat being a cause of metaphorical variation, mentioned in *Teaching and Learning English Metaphors* by Krishnamurthy (2005), is the metaphoric use of *emu* to refer to a fast person in Australian English.

Metaphor, apart from being a social-cultural phenomenon, as seen above, is correspondingly bodily in the sense that it affects and structures gestures the way it structures linguistic expressions (Cienki, 2008; McNeil, 1992). McNeil (1992) considers gestures and language to be “truly integral parts of a single process, with the gestures manifesting the imagery that is inherent in this process at an early stage” (p.105). Gestures, or gesticulants, according to McNeil, are regarded as symbols that display “imagery of what the speaker is thinking about.” Since most speakers oblivious about their gestures, meticulous observers can make use of gestures of the speakers to tell what they intend to say or even “read” their minds.⁷ Metaphoric gestures can be seen when people talk about the past and future. When speaking about the past, people put their hands near the back of their shoulders or heads to refer to the past; while they put their hands forward to refer to the future.⁸ The conceptual metaphors that structures gestures in this context are: *PAST IS BACKWARD*, *FUTURE IS FORWARD*. These metaphorical gestures can also be called “deictic gesticulants” (McNeil, 1992) since they refer to temporal locations, past and future.

Further examples of conceptual metaphors and their gestural manifestations will be discussed below.

McNeil (2005) also demonstrates that metaphoric gestures can be expected or unexpected. Expected metaphoric gestures are those that comply with the cultural models, while the many unexpected ones are proved to be metaphoric only if their purpose is considered in relation to the discourse context.

Metaphors are not just a matter of language, but of thought as well. Thibodeau and Boroditsky (2011) argue that the use of metaphor exerts a strong influence on the way we reason about complex problems. For example, the use of metaphorical frames can create huge differences in opinion between Democrats and Republicans (Thibodeau & Boroditsky, 2011; Lakoff, 2004). Boroditsky (2001) also argues that conceptual metaphors can shape thinking about concepts such as time. In an experiment, she demonstrated that Mandarin speakers are more inclined to think of time vertically than English speakers who perceive of time horizontally. Müller (2008) goes further in her research to argue that metaphors are modality independent and are a product of cognitive processes such as attention. Metaphors are also dynamic and are shaped via foregrounding in that the activation of metaphors may be low or high according to the context.

There is a myriad of research investigating conceptual metaphors in English and other languages from different perspectives. However, academic research dedicated to studying conceptual metaphors in Tachelhit is very scarce and almost non-existent. Among the very few studies that tackle metaphor in Tamazight in general and Tachelhit in particular are Mohamed Yeou (2016) and Mohamed Seguenfle (2011), respectively. Nonetheless, the former study deals with semantic extensions of body-parts metaphors only while the latter investigates metaphor semantically in its poetic and linguistic essence more than in its cognitive nature. Also, studies on metaphoric gestures in Tachelhit are non-existent and this research paper serves as a reference and starting point for further studies in this field.

Methodology

This research paper utilizes a content analysis technique for data collection and analysis. Content analysis, according to Tavakoli (2012), is “a procedure which is used to convert written or spoken information into data that can be analyzed and interpreted (p.101).” The data for this research is taken from the following Tachelhit movies:

Boutfunast Da Hmad (*Da Hmad and His Cow*), 1992.⁹

Lhokouma (*The Government*), 2018.

Ajafrar, 2019.¹⁰

Kamchich, 2019.

Sidi Mansor, 2019.

Imiss, 2019.

Tirrougza Itmghart (*The Power of Women*), 2017.

Bizan (*Flies Lover*), 2017.

The data taken from these movies through meticulous observation will be translated into English in the Discussion Section of this paper. Communicative translations are given in parentheses once direct translations do not communicate the underlying meaning. However, it is worthy to note that word-for-word translation may be needed by non-Tachelhit speakers to wholly grasp and understand the metaphorical mappings that take place within those conceptual metaphors.

Content analysis as a research technique is advantageous in that it is “unobtrusive.” That is, the observer is not observed, and hence the data collected for analysis is not influenced by the presence of the observing researcher. Another major advantage of content analysis according to Tavakoli (2012) is that the researcher is not restricted by time and space; which enables the researcher to access the recorded information of an earlier time. Despite these advantages, content analysis as a technique is disadvantageous in that, as aforementioned, the researcher is restricted to access recorded information only. To avert from this detriment, data is also collected from the mental lexicon of the author of this paper and other native speakers of Tachelhit language through observation. The researcher observed various groups by taking the role of a complete participant.

Research by Jalal Raii (2009) from Tishreen University, who adopted a conceptual approach to examine metaphor in day-to-day Arabic speech, has also been of great use. Few conceptual metaphors which exist¹¹ both in Arabic and Tachelhit have been taken, categorized, and further analyzed.

Discussion

The following conceptual metaphors which to be discussed below cover diverse everyday concepts such as speech, ideas, time, problems and difficulties, weakness, goodness, emotional states and organs, argument, sight, and mind. It is worthy to note, as mentioned before, that the translation will be literal so that the non-Amazigh readers can wholly grasp and understand the metaphorical mappings that take place within those conceptual metaphors. Understanding these mappings is enough to deduce the communicative meaning of the metaphoric linguistic expressions below. However, communicative meaning and additional commentaries will be given- between parentheses- when necessary.

Conceptual metaphors will be presented here from the most productive concepts in Amazigh culture to the least productive ones. The most productive concepts may be taken to be the ‘most’ important in the Amazigh culture. The following are conceptual metaphors from Tachelhit language which revolve around the concept of time:

TIME IS MONEY/ COMMODITY

Time here is conceptually structured in terms of a precious substance or commodity (money) which can be given, saved, spent wisely, or wasted.

Table 1. *TIME IS MONEY/ COMMODITY*

Tachelhit	English Translation
Manik asatzrayt luqt?	How do you spend time?
Artsxsart luqt.	You squander time.
Ijla luqt.	He lost time.
Dars 30 εam.	He has thirty years.
Ifas rbi tudrt.	God gave him life.

TIME IS A HUMAN BEING

Time, as these metaphoric linguistic expressions reveal, is conceived of as a human being. The following ontological metaphors are also personifications:

Table 2. *TIME IS A HUMAN BEING*

Tachelhit	English Translation
Argis tša luqt.	Time is laughing at him.
Itabean d luqt.	He is tolerating time.
Imay d luqt.	He is fighting with time.

TIME IS A MOVING OBJECT

Time, an abstract concept that we live by, is experienced here as a moving object. The following examples show that the speaker is static; while time is moving towards and passing by the speaker:

Table 3. *TIME IS A MOVING OBJECT*

Tachelhit	English Translation
lkmn lēwashir.	The (religious) celebration has arrived.
Iqrbd rmdan	Ramadan is approaching.
Tushkad luqt lmaεqul.	The time of seriousness has come.
Artfaray luqt/ artaylal luqt.	Time flies.

Tbid luqt.	Time stopped.
Izri yanayr dyiya.	January passed fast.
Tqrbd leutla	Holiday is approaching.
Lεam dyushkan.	The upcoming year.
Tzri flas lu9t.	Time has passed him.
Rak sul tlkm luqt.	Time will reach you.

TIME IS A LOCATION

This conceptual metaphor, on the contrary, is understood as stationary. These metaphoric expressions indicate that time is a location we conceptually head toward to:

Table 4. *TIME IS A LOCATION*

Tachelhit	English Translation
Artlih s lmustaqbal inu.	I am searching for my future.
Ilkm 100 εam.	He reached 100 years.
Arnt9rab leid.	We are approaching the (religious) holiday.
Nqrb Rmdan.	We are getting near to Ramadan.
Ixsak ataqrat bach atuslt.	You have to study so you can arrive (great future).
Iqrb i tmanin εam.	He reached 80 years.
Izri xmsin εam.	He stepped over forty.
Lhd n lem r ns ayan.	That is the limit of his age.
Zri tudrt.	Pass life (<i>enjoy life</i>).

These conceptual metaphors are existent in other languages such as English. However, there are few metaphoric linguistic expressions which would sound peculiar if calqued into and used in English. For example: *Pass life*, *time stopped*, *time laughs at him*, and *fight with time*. The succeeding conceptual metaphors deal with another aspect of human life; that of speech.

SPEECH IS A COMMODITY/ OBJECT

Speech is cognitively taken in and constructed in terms of the more concrete source: commodity or object. Speech can go down to the ground to indicate worthlessness, be weighed or empty to suggest value and insignificance, respectively. Speech and words can also be organized, delivered, be moved, and taken away the way we handle concrete objects. The following instances attest to this:

Table 5. *SPEECH IS A COMMODITY/ OBJECT*

Tachelhit	English Translation
Ika wawal ns akal.	His speech came down on the ground <i>(His speech is worthless).</i>
yayad ika sul yar rg.	This (speech) is scattered all over the ground.
Qs-han iwaliwn ns.	His words are hard <i>(he is intolerantly harsh).</i>
Iyatinit kra, tuznt.	If you want to say something, weigh it.
Urtswa tjmaet ns yat.	His speech has no value.
Urtsker tjmaet ns yat.	His speech is inoperative.
Txwa tjmaet ns.	His speech is empty.
Sgada awal nk.	Organize your speech.
Slkm laxbar.	Deliver news.
Ks ina y imink.	Take away my mother from your mouth <i>(do not talk about my mom).</i>
Tfay agayunu.	It got out from my head <i>(I forgot it).</i>
Tajmaet an tkshim d umzuya tfay d waya.	Those words got into this ear and got out from the other ear <i>(not important to heed).</i>
Tgami atkshim lhdrayan aqalanu.	Her words couldn't get into my head.
Manid sim tka tjmaet?	From where did words come from? <i>(Got news from where?)</i>

SPEECH IS FOOD

Speech is conceptually organized as a whole in terms of food. Speech can be delicious, sweet, or bitter. These conceptual metaphors also show that speech is honey; speech can be swallowed, and taken away:

Table 6. *SPEECH IS FOOD*

Tachelhit	English Translation
Imim wawal nm.	Your speech is delicious.
Uritzri tjmaet ns.	His speech can not be swallowed.
Tga tjmaet ns tamnt.	His words are honey.
Tamnt aytfayn d imins.	Honey is coming out of your mouth.
Thara tjmayt ns.	His words are bitter.
Ks tajmaetan y imink.	Take away those words from your mouth (<i>don't talk about it</i>).

WORDS ARE DELICATE OBJECTS

Apart from being metaphorically conceived of as a hard object and as food, speech, or words, is also conceptually understood and used as if it were a delicate object:

Table 7. *WORDS ARE DELICATE OBJECTS*

Tachelhit	English Translation
Ardur trzat ri.	Don't break the words (<i>don't disagreeably argue</i>).
Arisxsar tajmaet.	He is messing up words (<i>his words are unpleasant</i>).

ARGUMENT IS WAR

Argument is metaphorically structured in terms of war or fight. When arguing, people can conceptually explode things, kill, block, corner, knead, press, and squeeze other people. We can also break other people's heads when we use words that have weapon-like effect as seen in *irza agayunu s tjmaat* (He broke my head with words).

Table 8. ARGUMENT IS WAR

Tachelhit	English Translation
Sfayd iwaln nk.	Pop up your eyes (ready-for-fight facial expression).
ersh.	Pose upright.
Irza agayunu s tjmaat.	He broke my head with words (<i>he is disturbing</i>).
Sbaqi tarmant.	Explode the pomegranate (<i>say bad things and start a fight</i>).
Sgada awal nk.	Arrange your words.
Inyat.	He killed him.
Yudas s wakal.	He pressed him to the ground.
Imryt y wakal.	He put him to the ground.
Iqnk in.	He blocked you.
Ihnglatin.	He cornered him.
Islsayas ljam.	he reined him
Yumzk.	He caught you.
Iejnk.	He kneaded you.
Igak.	He washed you. ¹²
Iesrk.	He squeezed you.
Ratsgadah d wakal.	I will flatten him with the ground.
Isker gik shifun.	He made you a dirty mat.

NEWS IS A HUMAN BEING

Speech, in the form of news, is, as these metaphoric linguistic expressions display, conceived of as a human being who can be ill or healthy depending if the news are bad or good:

Table 9. *NEWS IS A HUMAN BEING*

Tachelhit	English Translation
Laxbar hrshnin.	Ill news (<i>bad news</i>).
Laxbar yuki lhal.	Healthy news (<i>good news</i>).

DIRECTNESS IS UP

Directness in Tachelhit is conceived of vertically. The examples below, which can both translated into ‘*be direct in your speech*’, show that being direct is up. This conceptual metaphor also suggests that speech goes vertically from indirectness to directness at the top:

Table 10. *DIRECTNESS IS UP*

Tachelhit	English Translation
Ut awal y ufla.	Hit the speech from the top.
Afla n wawal.	The peak of the speech.

WORDS ARE LIQUID

Words, in this metaphoric expression, are conceptually structured in terms of a liquid. Words flow from one’s mouth like a liquid. If the words are unpleasant, the hearer may metaphorically wish that the liquid freezes to obstruct the flow words:

Table 11. *WORDS ARE LIQUID*

Tachelhit	English Translation
Aniqar y imink.	May it (words) freeze in your mouth. (<i>Perish the thought</i>).

Speech is such a productive concept in Tachelhit. Speech is structured conceptually as if it were a commodity, hard and delicate object, and food. Speech, or words, is also conceived of as a liquid that can freeze to block the flow of bad words from the mouth. Besides, speech in the form of news is personified as a human being who can be healthy or sick (i.e. good or bad news). Argument and directness are structured in terms of war and verticality, respectively. The next conceptual metaphors have to do with problems and difficulties.

PROBLEMS ARE KNOTS

Problems are experienced in terms of knots. The solution is resolved once the knot is untied. A problem can also be conceived of- as the third metaphoric linguistic expression attests- as if two people are tied together. They can solve the issue if they know how to disentangle the knot fastening them together:

Table 12. *PROBLEMS ARE KNOTS*

Tachelhit	English Translation
Tnfasay tmukrist.	The knot has been disentangled.
Tfuka tmukrist.	The knot has been unknotted.
Ursnh manik asadik nfuku.	I don't know how to disentangle from you (<i>I don't know how to solve the issue with you</i>).
Ifukat.	He unknotted it.
Maygan amukris nk?	What is your knot? (<i>What is your problem?</i>)

DIFFICULTIES ARE IMPEDIMENTS TO MOTION

Aside from being conceptually structured as knots, problems, or difficulties, are metaphorically understood as impediments to motion. As the table below shows, difficulties can be carried, burden you, or be lifted as heavy objects:

Table 13. *DIFFICULTIES ARE IMPEDIMENTS TO MOTION*

Tachelhit	English Translation
Yusi lhm.	He is carrying worry.
Tzday flas tmukrist an.	That problem burdened him.
Tusit yili ytzday.	He lifted it (the problem) from the heavy side.

PROBLEMS ARE LOCATIONS

Problems are not just knots or impediments, but also locations. A person can be in a problem, get struck in a problem, or keep away from a problem:

Table 14. *PROBLEMS ARE LOCATIONS*

Tachelhit	English Translation
Ila y tmukrist.	He is in a problem.
Ituz y tmukrist an.	He got stuck in that problem.
Itin y tmukrist an.	Keep away from that problem.

The following conceptual metaphors deal with various concepts which have to do with emotional states, seeing, ideas, hunger, sleeping, goodness, stupidity, repute, usefulness, weakness, money, mind, and quantity:

EMOTIONAL STATES ARE ORGANS AND (BRITTLE) OBJECTS

In Tamazight culture, the liver is seen as the location of emotions.¹³ In Euro-American culture, however, the heart is perceived as the site of emotions. The liver can be cut, burnt, exploded, and broken to convey the meaning of being extremely sad. Hearts can also be dead to express the meaning of being indifferent to something. Moreover, emotional states are also conceptually structured as fragile objects that can be disorganized, collapsed, lost, crashed (like a system crash), or entangled. The following examples confirm to this:

Table 15. *EMOTIONAL STATES ARE ORGANS AND OBJECTS*

Tachelhit	English Translation
Tbi tasanu.	My liver is cut (<i>I am sad</i>).
Tjder tasanu	My liver is burnt (<i>I am sad/ suffering</i>).
Imut <u>ul</u> ns.	His heart is dead (<i>He is indifferent/ careless</i>).
Tsxsrt lxater inu.	You disorganized my mood (<i>you made me mad</i>).
Ixla.	He is collapsed (<i>He is crazy</i>).
Ifayt leaqlns.	His mind got out.
Idayas leaql ns.	His mind went away.
Urtafy leaql.	I don't have mind.
Irza tasanu	He broke my liver (<i>Heartbroken</i>).

Isbaqi tasanu	He exploded my liver (<i>He broke my heart</i>).
Ixla f tfruxt an	He collapsed over her (<i>He is so mad about her</i>).
Iṣuṭi ywana.	He crashed (<i>He is crazy</i>).
Nhabarn ifalan ns.	His strings are entangled (<i>He is crazy</i>).

SEEING IS TOUCHING and EYES ARE LIMBS

Seeing is touching. To see someone or to glare at him is to put or stuck eyes on him. Seeing is also conceived of like a mouth that can eat someone or be quenched with water. Eyes are also conceptually understood as limbs that can hit and reach people¹⁴:

Table 16. *SEEING IS TOUCHING and EYES ARE LIMBS*

Tachelhit	English Translation
Istuz giti iwaln ns.	He stuck his eyes on me.
Igami agiti yal iwaln ns.	He could not lift his eyes off me.
Tut tiṭ.	An eye hit him.
Ishayi s iwaln ns.	He ate me with his eyes.
Isrs flati iwaln ns.	He put his eyes on me.
Uratn tzrt ola tswit gisn izrinm.	You won't see them nor will you have them quench the thirst of your eyes.
Hkamt waln.	Eyes can reach her.

SEEING IS LIGHT/ UNDERSTANDING

To see light is to understand, to see darkness is to not understand something. Seeing darkness can also mean being blind:

Table 17. *SEEING IS LIGHT/ UNDERSTANDING*

Tachelhit	English Translation
Urisfaw agayuns.	He can not see himself.

Isak tbayn kran tifawt?	Can you see some light?
Urtsfawt.	You are blind.
Uryina tsfawt walu.	You can not see anything.
Tilas ayitbayan.	I can only see darkness.
Urak ibayn yat?	Is anything clear to you?

IDEAS ARE HUMAN BEINGS

This ontological metaphor is conceptually understood in a human-like quality, i.e. being able to pay visits:

Table 18. *IDEAS ARE HUMAN BEINGS*

Tachelhit	English Translation
Xta urju tka agayunu.	This (idea) has never visited my head.

IDEAS ARE OBJECTS

This conceptual metaphor shows that ideas are structured in terms of concrete objects that can revolve, be in the head, get out of the head, or be seen:

Table 19. *IDEAS ARE OBJECTS*

Tachelhit	English Translation
Agayumn uragis itdwar umya.	Nothing (ideas) revolves in your head.
Maylan y ugayunk?	What is in your head?
Tfay agayunu.	(The idea) got out of my head.
Xtad urtin anih.	I did not see this one (idea).

HUNGER IS A KILLING THING

Hunger can be a displeasing thing. However, it is metaphorically experienced in Tachelhit as a killing thing; a person or a disease:

Table 20. *HUNGER IS A KILLING THING*

Tachelhit	English Translation
Inyayi laz.	Hunger killed me (<i>I am hungry</i>).

Imut s juɛ.	He died because of hunger (<i>He is starving</i>).
-------------	--

SLEEPING IS UNAWARENESS

A sleeper is metaphorically seen as being unconscious or in a deep well:

Table 21. *SLEEPING IS UNAWARENESS*

Tachelhit	English Translation
Urta diaql?	Is he still unconscious?
Iginn y wanu.	He slept in a deep well (<i>deep sleep</i>).

USEFULNESS IS A PRECIOUS OBJECT

Usefulness conceived of as a precious thing that can be located, owned, or taken:

Table 22. *USEFULNESS IS A PRECIOUS OBJECT*

Tachelhit	English Translation
urgis lfayt	Usefulness is not in him (<i>He is useless</i>).
Urtaf lfayt	You don't have usefulness.
Ksn gis lfayt.	They took usefulness from him (<i>seen as useless</i>).

REPUTE IS A DELICATE OBJECT

Repute is something that needs to be wholeheartedly regarded; otherwise, someone will conceptually break it, as the following example displays:

Table 23. *REPUTE IS A DELICATE OBJECT*

Tachelhit	English Translation
Trza learada nu.	She broke (<i>did harm to</i>) my repute.

WEAKNESS IS EMPTINESS

Empty knees are weak ones. The reverse is correct. Knees are also conceptualized as containers that need to be filled to have energy and strength:

Table 24. *WEAKNESS IS EMPTINESS*

Tachelhit	English Translation
Xwan ifadn.	The knees are empty (<i>weak</i>).

GOODNESS IS A STRAIGHT LINE¹⁵

Goodness is metaphorically conceptualized as a straight path. A good person is on the path, while a bad person is off the path. A good person can also have a good path, while a bad person can have a bad path:

Table 25. *GOODNESS IS A STRAIGHT LINE*

Tachelhit	English Translation
Ifay ayaras.	He went astray from the path.
Tayarast ns txshin.	His path is bad.

STUPIDITY IS A DONKEY

A donkey is associated with stupidity in many languages. However, a tricked or a foolhardy person is also referred to as a donkey. A person can put a donkey saddle on you (*trick you, make you stupid*), or make a donkey from you (*make you stupid*):

Table 26. *STUPIDITY IS A DONKEY*

Tachelhit	English Translation
Islsayas <u>ahlays</u> .	He put the donkey saddle on him (<i>He made him stupid</i>).
Isker gis ayyul.	He made him a donkey.

MONEY IS DIRT¹⁶

Money is metaphorically talked about as filth. A person can stink with money because he has filth (riches). This does not refer to dirty money earned illegally. Illegal money is *lflus n lhram n* Tachelhit:

Table 27. *MONEY IS DIRT*

Tachelhit	English Translation
Ijja s lflus.	He stinks with money (<i>he is rich</i>).

Irkan n dunit.	The filth of the earth.
----------------	-------------------------

QUANTITY IS VERTICALITY

Anger and price are both conceptually structured in terms of verticality. As you add more quantity, things go up. As blood goes up, the angrier you are. The more costly things are, the higher they go; the cheaper they are, the lower they go:

Table 28. *QUANTITY IS VERTICALITY*

Tachelhit	English Translation
yliniyi idamn.	My blood rose (<i>I am angry</i>).
Iyli watig ns.	Its price went up.
Idr watig ns.	Its price went down.

MIND IS A BRITTLE OBJECT

Mind, the generator of all these metaphors, is metaphorically constructed as a brittle object. This object can be a fragile and delicate feather, a device that can crash, or a frame that can break down:

Table 29. *MIND IS A BRITTLE OBJECT*

Tachelhit	English Translation
Lah tarisht n leaql.	His mind is fragile as a feather (<i>He is insane</i>).
Iṣuṭi.	He crashed.
Ixla.	He broke down.

Conceptual metaphors do not only structure linguistic expressions, but also gestures.

Metaphoricity in Gesture

Gestures, if observed with a meticulous eye, can show that they are well structured and organized according to conceptual metaphors. Some of these gestural metaphors can be universal in the sense that it is a bodily phenomenon which all people experience. For example, for most communities, people see the future as being ahead and past as being behind. This conceptual metaphor, *FUTURE IS FORWARD/ PAST IS BACKWARD*, can be observed in our gestures when we put our hands outward and backwards to refer to future and past, respectively. In some cultures, the reverse could be true.

Another example is how social status, increase in prices, and events are metaphorically structured in our gestures. When talking about social status or increase in prices, our hands tend to go up vertically. Contrariwise, our hands move horizontally from right to left or from left to right

when we converse about events in time. Also, people can also metaphorically conceive of ideas as objects. The conceptual metaphor IDEAS ARE OBJECTS can be observed in gestures when people put forward their bowl-shaped hands as if holding an object which represents the idea they are talking about. The speaker, if agreed to the idea, will pull the hand towards his chest. If the idea is rejected, he will exhibit with his hand that he is putting or throwing that idea away.

However, other gestural metaphors may be differently conceived or interpreted due to the cultural contexts in which languages take place. The following are some of the metaphoric gestures which have been observed:

A speaker of Tachelhit can present a hand with the palm facing up as if holding an object which stands for the idea. The hand would then move slightly up and down as if weighing that unseen object which metaphorically stands for the idea. If the metaphoric gesture suggests that the object is heavy, then the idea is important. On the contrary, if the gesture shows that the object is light, then the idea is trivial. The conceptual metaphor that structures this gesture is: HEAVINESS IS IMPORTANCE (figure one).

When speaking about a goal to be achieved, a speaker's gestures may unconsciously be structured in terms of an ascent: PERSEVERANCE IS AN ASCENT (figure two). The speaker would show a hand that goes up step by step as if ascending a ladder or stairs. Another conceptually metaphoric gesture is when people interlock their fingers together forming a knot to metaphorically refer to a problem PROBLEMS ARE KNOTS (figure three).

Among Tachelhit speakers, it is also noticed that a person would protrude his straight index fingers from their formed fists and then adjoin their index finger together to metaphorically communicate rapport and friendship: RAPPORT IS PHYSICAL CLOSENESS (figure four). On the contrary, a person conveys animosity by protruding his crooked index fingers from his fists while hooking them together to signal tightness: ANIMOSITY IS PHYSICAL TIGHTNESS (figure five).

Metaphoricity in gesture is also depicted when people talk about fineness or excellence. A person would refer to excellence by making a squeezed fist with the thumb squeezed against the index finger. The conceptual metaphor in effect here is: EXCELLENCE IS FIRMNESS (figure 6).

Figure 1. HEAVINESS
IS IMPORTANCE

Figure 2. PERSEVERANCE
IS AN ASCENT

Figure 3. PROBLEMS
ARE KNOTS

Figure 4. RAPPORT IS
PHYSICAL CLOSENESS

Figure 5. ANIMOSITY IS
PHYSICAL TIGHTNESS

Figure 6. EXCELLENCE
IS FIRMNESS

It is very important to note that metaphoric gestures may be subject to different interpretations within different communities as well as in different contexts. Intertwining fingers, for instance, may refer to a problem or teamwork.

The analysis of the conceptual metaphors in Tachelhit shows that Tachelhit and English do share certain conceptual metaphors related to time, emotions, speech, argument, problems, sight, ideas, sleeping, quantity and mind. These conceptual metaphors are, but not limited to: TIME IS MONEY, TIME IS A MOVING OBJECT, TIME IS A LOCATION, SPEECH IS FOOD, ARGUMENT IS WAR, PROBLEMS ARE KNOTS AND LOCATIONS, DIFFICULTIES ARE IMPEDIMENTS TO MOTION, EMOTIONAL STATES ARE ORGANS, SEEING IS TOUCHING, EYES ARE LIMBS, SEEING IS UNDERSTANDING, IDEAS ARE OBJECTS, SLEEPING IS UNAWARENESS, STUPIDITY IS A DONKEY, QUANTITY IS VERTICALITY, MIND IS A BRITTLE OBJECT.

However, the two languages do differ to a higher extent in some other conceptual metaphors related to time, sight, money, goodness, hunger, usefulness, repute, weakness, and speech. These conceptual metaphors include, but are not limited to: TIME IS A HUMAN BEING, NEWS IS A HUMAN BEING, DIRECTNESS IS UP, WORDS ARE LIQUID, HUNGER IS A KILLING THING, WEAKNESS IS EMPTINESS, GOODNESS IS A STRAIGHT LINE, MONEY IS DIRT, USEFULNESS IS A PRECIOUS OBJECT and REPUTE IS A DELICATE OBJECT. These conceptual metaphors are vital elements that need be taken into consideration in intercultural as well as intracultural contexts to overcome communication failures.

The findings of this research are of paramount importance in that they shed light on the cultural groupthink of the Amazigh people in Morocco. The research is also essential in that it presents its findings as a starting point for further research aiming at contributing to the field of metaphor in Tamazight linguistics as well as filling the gap that exists in its literature. Metaphor, as may be considered by many, is not just a poetic ornament, but rather a conceptual phenomenon that is pervasive in our daily language.

Conclusion

It is demonstrated through this research paper that metaphor is a conceptual experience that pervades our everyday speech. It is also seen that Tachelhit shares some conceptual metaphors with English but differs in others. For example, *Time is a Human Being*, *News is a Human Being*, *Directness is Up*, *Words are Liquid*, *Seeing is Touching*, *Eyes are Limbs*, *Hunger is a Killing Thing*, *Weakness is Emptiness*, *Goodness is a Straight Line*, and *Money is Dirt*.

Conceptual metaphors structure gestures as well. These metaphoric gestures are a tool used unconsciously to communicate abstract things. Conceptual metaphors as depicted by linguistic expressions and gestures are subjected to universality as well as variation. The reasons for variation, as mentioned by Kövecses (2010), are the broader cultural context and the natural and physical environment of a language.

The study of metaphor can shed light on different ways people conceive of things. Knowing the cultural groupthink of a society, on which conceptual metaphors are built, is a key for overcoming intercultural communication barriers and failures caused by unawareness of metaphor variation across languages. Moreover, the study of metaphoric gestures can also reveal the speaker's real focus of attention in real-time communication.

From this point, it is recommended that further research can be done to investigate the linguistic and socio-cultural causes of metaphor variation across and within Moroccan communities. Further research is also needed to examine the multi-metaphoric gestures that speakers display when conversing. This may have vital applications in the fields of cognitive linguistics, communication and discourse studies.

Endnotes

¹ Tamazight is preferred here as the name of the language under study since the word 'Berber' is derogatory. The diphthong *gh*, in the word Tamazight, is a voiced velar fricative, and can be written and also transcribed as /ɣ/.

² It is noteworthy to point out that the word Tamazight refers both to the dialect in the center of Morocco and also to the Berber language in general. Tamazight is also the name of the official language of Morocco.

³ Cultural models are "best conceived of as any coherent organizations of human experience shared by people." (Kövecses, 2005, p.193).

⁴ ARGUMENT IS WAR is a conceptual metaphor, while the three expressions below it are called metaphorical linguistic expressions.

⁵ There are other metaphorical concept examples of orientational metaphors. For example: *good is up*, *bad is down*/ *health and life are up*, *sickness and death are down*. Further examples can be found in Lakoff and Johnson's *Metaphors We Live By*.

⁶ Personification can be considered as a type of ontological metaphor (Kövecses, 2010).

⁷ The ability to mind read in this context has nothing to do with occult. It merely means that gesticulants can sometimes reveal what the speaker is thinking about.

⁸ These gestures may mean the opposite in other cultures since the conceptual metaphors that structure gestures are different; *PAST IS UP/ FUTURE IS DOWN*.

⁹ This movie's date of publication refers to the date when the movie was officially released in cassettes, while the rest of other movies' dates refer to their publication in YouTube only.

¹⁰ The untranslated titles are just proper nouns.

¹¹ There are also metaphors which have been calqued (borrowed) from Arabic to Tamazight and vice versa, since these two languages have been in contact for ages, especially in Tamazgha region. These conceptual metaphors can still shed light on the cultural groupthink of both Arab and Amazigh people.

¹² This refers to being washed with force as people used to (or may still) wash clothes. This may involve just hands, a club that hits and squeezes clothes, or a wooden washing board with bumps by which clothes are forcefully pressed against and pulled up and down over the bumps.

¹³ Other unrelated languages such as Indonesian language also conceive of liver as the place of emotion: *patah hati* (heartbroken/ sad).

¹⁴ Eyes as having power that can hit or reach people may have root in magic and superstition in which people believe in.

¹⁵ This conceptual metaphor could be calqued from the Quran.

¹⁶ This conceptual metaphor may persist in the minds of poor people who envy rich people. It is also a characteristic of Sufi people.

About the author:

Youness Boussaid is a teacher of English language in Awesome Foreign Studies Center in Tianjin, China. He holds a bachelor's degree in English linguistics from Ibn Zohr university. His research interests include pragmatics, metaphor and second language acquisition.
